

SomaiyaSat: Marketing a PocketQube Mission

Course: Digital Marketing (216U04E734) | Lab CA : Poster Presentation

Vedant Walunj (16010423114) | Vedant Singh (16010423111)
Ayush Tiwari (16010423121)
Class: LY B.Tech IT | Div: A | Batch: A3

Faculty In-charge:
Prof. Poonam Narkhede/ Dr. Ankita Nagmothe

1. INTRODUCTION

- PocketQubes are 5 cm satellites with under 1 W of power and only a short pass over a ground station in low Earth orbit.
- SomaiyaSat has to reach students, faculty, ReOrbit (Finland), and the amateur-radio community, who are not in one room.
- The deployed site somaivasat.vercel.app is the public channel for use case KJS-SRS-01.

2. PROBLEM STATEMENT

- A technical mission is hard to grasp in a minute. Visitors never see why manual scheduling fails, or that the ground station is actually deciding.
- Scope is the website only: Home, Mission, Architecture, Program, and Ground Station. No paid ads. It is a demonstration, not a live spacecraft feed.

3. OBJECTIVES

- Position SomaiyaSat and SomaiyaPod: a PocketQube that deploys itself and decides what to send home.
- Move a visitor from awareness to action with “Open ground station” and “Read the mission”.
- Show every routing choice with a score, so the live demo is also the trust message.

4. LITERATURE REVIEW

- Strategy: inbound content marketing, using RACE — Reach, Act, Convert, Engage.
- Chaffey and Ellis-Chadwick (2019) — a planned journey on owned media beats one-off promotion.
- Hollebeek and Macky (2019) — useful content builds trust; engagement follows usefulness.
- Gap: student satellite work usually stops at a report, not a public path a visitor can watch.

5. METHODOLOGY / SYSTEM DESIGN

6. IMPLEMENTATION DETAILS

- Web page design: dark mission-control pages, short headlines, one amber button, and a navigation bar on every page.
- Marketing strategy: pull marketing through owned content, for students, faculty, ReOrbit, and the amateur-radio community.
- Related to the website: the router score is 0.40 priority + 0.25 urgency + 0.25 link + 0.10 power, with guard rails shown on the ground station.

7. RESULTS & DISCUSSION

8. KEY FINDINGS

- One primary button and a persistent navigation bar are enough to join the five pages.
- The live stream is the engagement asset: routing decisions are computed every simulated second.
- Explainable scores turn a power limit into a trust message for faculty and amateur radio.

9. CONCLUSION

- The site markets KJS-SRS-01 as a public mission: one click to the demo, or the longer story first.
- Students, faculty, and the HAM community can see the constraint and the guarded router without a briefing.

10. FUTURE SCOPE

- Measure page views, call-to-action clicks, and time spent on the ground station.
- Extend reach with Somaiya social channels and a one-page brief for amateur-radio clubs. The site is a demonstration, not a spacecraft feed.
